Bottomline Technologies is a leader in helping thousands of companies around the world make their complex business payments simple, smart and secure. With the depth and breadth of a company such as Bottomline, we are fully aware of the broader impact a company like ours can have on our communities and our planet.

Much of our business is focused on electronic payments and the elimination of paper checks. This alone has a significant environmental impact. We decrease our customers’ environmental footprint and save them millions of dollars a year by enabling them to make the switch from paper to electronic.

At Bottomline, we are fully committed to corporate social responsibility and sustainability. We support a wide range of worthy causes in each of the geographies in which we operate in many impactful ways.

We are pleased to share with you our 2020 Corporate Social Responsibility and Sustainability Report, which highlights the primary aspects of our corporate and employee-led charitable giving, along with sustainability efforts that include environmental impact across the globe.

At Bottomline, we’re proud of what we’ve been able to accomplish thus far, and we look forward to the opportunities in front of us to make a difference and be a positive force for good every day.

Rob Eberle
CEO

Guiding Principles

Delight Customers
Innovate, Communicate, Win & Grow
Work with & for Each Other
Do the Right Thing
Create & Grow Sustained Business Value
Be a Company of Which All Can Be Proud
Sustainability

The core of Bottomline’s business is to help organizations transition from paper checks to electronic payments, which in and of itself has a significant environmental impact. Our physical locations offer both single-stream recycling and electronic recycling and we continue to improve our environmental footprint by recycling materials during construction and renovation of our properties. We use sensored lighting, regulated HVAC systems, energy saving appliances, windows and doors, as well as furnishings and carpet made with recycled materials and on-site water purification systems to reduce the number of plastic bottles used. Sustainability is a way of life at Bottomline and it is exemplified through our products, customer interactions and employee engagement.
Electronic Payments and AP Automation

Bottomline’s solutions are inherently green because they're electronic, whether through accounts payable automation or through electronic payments and the elimination of paper. According to the National Automated Clearing House Association (NACHA), traditional approaches to paying suppliers are a major contributor to high accounts payable costs, with checks 30 times more expensive to issue compared to ACH payments. Automated electronic invoice to payment processes cost 60% less on average than their manual paper-based counterparts. Compared to manually processing invoices, automation typically delivers a major cost savings because accounts payable organizations can deliver approximately 17 times as many invoices annually per employee than their peers that rely on manual processing. Additionally, invoice automation delivers indirect savings such as reduced paper and postage expenses, fewer supplier inquiries, and fewer redundancies and inaccuracies in the vendor master database.

For every 100 checks or invoices not printed, a customer conserves:

- 3 pounds of paper
- 3.8 gallons of gas
- 119 pounds of greenhouse gases
  (the equivalent of driving 117 miles)
- 16 square feet of forest
Data Centers

**Bottomline Technologies provides software solutions for more than 400,000 corporate entities, 1,100 financial institutions, 250 insurance carriers and 1,500 healthcare organizations.**

When you consider the breadth of our customer base, our cloud computing model has a significant impact on reducing the environmental footprint of these organizations over traditional IT hardware and software. By sharing computing resources among a large number of customers, we achieve enormous economies of scale, especially when it comes to carbon and energy consumption. We partner with some of the world’s best in terms of managing our data centers. Our industry partners have designed, built and operate with high energy efficiency standards and with a long-term goal of using 100% clean and renewable energy in line with these renewable energy principles:

- Utilize renewable and low carbon energy
- Prefer local sources of energy
- Prefer new or recently built energy sources
- Seek favorable renewable energy policies when locating new data centers

Our data centers deploy the following green technologies:

**Adaptive control systems** reduce power consumption and increase cooling capacity through active airflow management using intelligent, distributed sensors and innovative control policies.

**ASHRAE thermal guidelines** are used as reference in our newest facilities to optimize interior temperatures. This reduces power consumption for cooling while maintaining a safe operating temperature for computing equipment.

**Cold/hot aisle containment** uses physical barriers to reduce the mixing of cold air in data center supply aisles with the hot air in their exhaust aisles. This results in lower energy consumption and more efficient cooling.

**Energy-efficient lighting systems** in our data centers use motion-activated controls to reduce energy consumption and ambient heat from operating lights.

**Variable frequency drives** are deployed in chillers, pumps and fans in our HVAC systems to save energy by automatically reducing a motor’s speed and power draw to match lower system loads.
Green Facilities

At Bottomline we ensure that we operate as efficiently as possible with the least amount of negative environmental impact.

During remodeling initiatives our environmental commitment is to see that 95% of material from demolition is diverted from landfills, and is instead sorted and recycled or donated to non-profit organizations.

Since both heating and cooling emit greenhouse gasses, we strive to use less with the following measures:

- Zone occupancy sensors to minimize system usage
- Variable frequency drive fans to more accurately modulate air flow with space demands
- Return air ducts for more efficient and accurate movement of conditioned air and return air flow
- Web-based building control system allows monitoring and HVAC optimization

As a key factor in energy conservation, properly insulating our buildings makes a big difference in heating costs. We’ve used bio containing spray foams (sugar or soy based) with 9% renewable content to seal large diameter internal roof drain piping systems passing between floors, where cold column conditions are created. The columns are capped to prevent “chimney effect” and minimize infiltration. Air and temperature leaks are further decreased by sealing all penetrations, joints and openings in exterior walls, demising walls, concrete floors and decks above.
We leverage LED and other environmentally-friendly and energy-efficient lighting solutions. As with heating, we aim to limit consumption by taking the following measures:

- Occupancy sensors to allow lights to automatically shut off when rooms are unoccupied
- Light harvesting to dim lights in areas where natural light adequately illuminates the occupied area
- Limit work surface lighting levels to 35 foot-candle
- Limit lighting to less than one watt per square foot
- Install LED lights where technology is proven (walkway down lights)
- Integrate lighting into building controls system to allow automatic activation/shut-off of lighting
- Installation of photo sensors to activate exterior pole light operation only when needed

Recycled material content is a consideration when selecting furniture vendors. For instance, we provide Knoll Life Chairs for our employees. Not only do these chairs offer superior comfort and ergonomic support for our employees, they are also constructed largely from recycled materials, low VOC paints and adhesive, and have returnable packaging so that it can be reused. The chairs themselves are also recyclable. Knoll Life Chairs are:

- **GREENGUARD Indoor Air Quality Certified**
- **Children and Schools Certified**
- **Manufactured using clean technologies in the Knoll LEED® Gold and ISO 14001 Certified Lubin Building, where energy use is offset with electricity generated by wind power**

Our audio/video systems also use low wattage LED monitors that contain reduced levels of mercury.
Recycling

Bottomline Technologies has well-established recycling efforts at our facilities around the globe. We implement single-stream recycling wherever available. This allows recyclable paper and mixed containers to be put into the same receptacle. In addition to this, all employees also have a single-stream recycling bin right at their desk.

Improperly disposed of electronics can negatively affect the environment, and cause public health concerns. At Bottomline we have instituted a recycling drop-off area for batteries, CFL light bulbs, computer equipment, cell phones, ink cartridges, etc. These are disposed of in environmentally safe and secure disposal facilities designed for this type of electronic waste.

Sustainability Through Coffee

Bottomline recently made the move to decrease the use of coffee pods by installing new machines for standard coffee. These machines are much more economical and will not only reduce waste but also cost.

We also encourage employees to consider using a mug for coffee instead of using paper cups, to help further reduce our waste.

Electric Vehicle Charging Stations

As a part of Bottomline's ongoing commitment to sustainability, Electronic Vehicle (EV) charging stations are available at the corporate headquarters. Six charging stations at three portals are available to employees on a first come, first serve basis.

Water Bottle Filling Stations

At our Corporate Headquarters, we installed water bottle filling stations that deliver a quick, clean, water bottle fill while simultaneously minimizing our dependency on disposable plastic water bottles. At our EMEA headquarters, we have eliminated the use of plastic cups and introduced a reusable bottle for each employee, saving 30,000 plastic cups per year.
Bottomline Technologies Think Green Award

Bottomline is committed to protecting the environment. We lead by example through efficiency improvements at our physical locations, automating business transactions where possible and extensive recycling efforts. By providing B2B payment solutions, we help our customers improve the environmental impact of their carbon footprint.

Launched in 2009, the Bottomline Technologies Think Green Award highlights organizations that reduce paper use in their payment, invoice and transactional document processes through the use of Bottomline’s automation solutions. Recipients demonstrate how partnering with Bottomline allows their organization to achieve their ‘green’ initiatives. These solutions include migrating paper checks to ACH payments, automating their end-to-end payment process and moving to cloud-based technology.
At Bottomline Technologies we recognize our responsibility to the community at large and work to be a good corporate citizen, we do this through our BT Cares initiative. Being an active participant in our community is a fundamental responsibility. BT Cares ensures that we work hard to give back to the communities where our employees work and live. This commitment is exemplified by the number of employees involved in charitable organizations around the world as well as the support we have provided to these organizations over the years. Our commitment is more than a corporate program, it’s part of the people and the culture at Bottomline.
Helping Banks Help Small Business During COVID-19

As stay-in-place and social distancing ordinances swept the world in March 2020, small businesses were at the forefront of non-essential business closings. As the U.S. government and Congress acted to provide relief to small businesses, their payrolls and their people, the “Paycheck Protection Program” emerged as a core ingredient of the CARES Act. Many banks were struggling with how to administer the program to their business customers as details came to light. Quickly realizing that we had the technology to assist banks helping small businesses, the Bottomline Digital Banking team mobilized in a period of 24 hours knowing that existing Bottomline solutions could be engineered and offered up to help the nation’s banks provide program loans to small businesses. In a matter of days, Bottomline provided banks with a simplified SBA loan application platform to originate online loan applications under the “Paycheck Protection Program” as well as access to our existing online small business account opening platform. Those solutions were made available to any bank at no cost.

“We saw an opportunity to help in this crisis. We are not set up to sew masks or to manufacture ventilators. We do have technology that can help provide funding to small businesses that are so vital to the country’s economy and its employment. This is our small part in standing up to this unprecedented global challenge.”

Rob Eberle
CEO, Bottomline Technologies

1,800+ small business loan applications

$120M originated through the platform
Over the last five years, Bottomline has donated $2.5M to charities across the globe.
Bottomline Helps to Feed Children During COVID-19 School Closures

In March of 2020, Bottomline made a $100,000 donation to two New Hampshire organizations: Gather and End 68 Hours of Hunger. The donation assisted in providing meals to children impacted by school closures due to Coronavirus. Unfortunately for many children, breakfasts and lunches served at school may be their only guaranteed meals. Recognizing the need, both Gather and End 68 Hours of Hunger are actively providing food to children who need it.

End 68 Hours of Hunger

Bottomline was the first Charter Sponsor of End 68 Hours of Hunger, an organization created to confront the approximately 68 hours of hunger that some school children experience between the free lunch they receive in school on Friday afternoon and the free breakfast they receive in school on Monday morning. The program is run completely by volunteers. Of the donated funds, 100% goes toward purchasing food for the children in the program. As of January 2020 the organization is feeding nearly 3,000 children every week, in part due to Bottomline’s continued support.

Gather

For 200 years, Gather has been serving New Hampshire Seacoast residents facing hunger. The agency was founded in 1816 by a small group of women committed to feeding the families of fishermen. Today, Gather is committed to ending local hunger through collaboration and leadership. Gather serves those experiencing hunger by providing nutritious food through innovative distribution programs and its Pantry Market. 90¢ of every dollar donated to Gather goes directly toward local hunger relief.

“We sincerely appreciate Bottomline stepping up as the front runner role model for all businesses that have the wherewithal and community concern. The peace of mind this donation will shed on the parents, teachers, medical community, the Seacoast overall, is monumental.”

Deb Anthony
Executive Director, Gather
Granite State Award

Recognition of an outstanding record in community support

Bottomline Technologies is a proud recipient of the Granite State Award, in recognition of its outstanding record in community support. The award is given annually by the University of New Hampshire, and was presented to Bottomline due to its long standing record of outstanding community support.

United Way

Bottomline Technologies is a long-time partner of the United Way, supporting the annual campaign since our founding. Bottomline is proud to have participated in the United Way’s “loaned executive” program. Our employees have accepted field assignments to work as a United Way spokesperson in the community to educate other corporations, as well as participating in the annual “Day of Caring”.

Bottomline for Good Around the Globe

Nishkam SWAT

Bottomline team members from the London and Reading offices regularly support this initiative by donating clothes and volunteering to serve hot food to the homeless.

Reading Rescue

Bottomline volunteers join the community in the biggest bi-annual clean-up in Reading. They tackle parks, streets and open spaces.

Nature Day

Bottomline’s Swiss team members volunteer near the Geneva River to support its fundamental role of providing habitat for the local flora and fauna.
Australian Wildfires

Australia is no stranger to bushfires and the 2019-2020 season proved to be unprecedented in many ways. The fire situation worsened significantly at the beginning of November 2019 burning more than 46 million acres of land. At least 80% of the Blue Mountains World Heritage area in New South Wales and 53% of the Gondwana world heritage rainforests in Queensland were burned. Bottomline did its part to support the recovery efforts with a $10,000 donation distributed to the following organizations:

• RSPCA Australia
• New South Wales Firefighters
• Country Fire Authority Victoria

$10,000 donated to aid in the fight against the Australian wildfires.
Bottomline Technologies Race for a Cause

The Bottomline Technologies’ Race for a Cause benefits local charities with proceeds from the race. In 2019, the race supported Court Appointed Special Advocates (CASA) of New Hampshire.

Since 1989, CASA of New Hampshire has represented more than 10,000 children in the family court system who have suffered from abuse or neglect. Volunteer advocates provide a voice for thousands of children who were placed at risk by their parents or caregivers. CASA is committed to speaking on behalf of the best interests of New Hampshire’s most vulnerable children. With our most successful race to date, in 2019, the Bottomline team raised $75,000 from corporate sponsorships and race participation.

$75,000 raised from sponsorships and participation

65% of race participants are Bottomline families

74% of race volunteers are Bottomline employees
Some of the Organizations We Support on an Annual Basis

- United Way
- The Humane Society of the United States
- End 68 Hours of Hunger
- New Hampshire Food Bank
- Dana-Farber Cancer Institute
- Launchpad
- National Multiple Sclerosis Society
- Alzheimer's Society
- Alzheimer's Association®
- Girl Scouts
- Salvation Army
- Boys and Girls Clubs of America
- Northeast Passage
- New Hampshire SPCA
- Cross Roads House
- The Royal British Legion
- BBC Children in Need
- Parkinson's UK
- Change Attitudes. Find a Cure. Join Us.
Bottomline Technologies Team Member Choice Charitable Giving Program

The Bottomline Technologies Team Member Choice Charitable Giving Program allocates funds to be distributed to charities chosen entirely by our employees and donated on the employee’s behalf. Bottomline has donated to **MORE THAN 1,000 DIFFERENT CHARITABLE ORGANIZATIONS** globally through this program. This chart shows what types of charities our employees chose to donate to. The following pages list the charities themselves.

Total dollars donated globally in 2019

$1M

- **12%** Health
- **25%** Social Services
- **16%** Education
